

# Unique painting robot with seven integrated axes

## Next level precision and productivity

- optimally position arm in interior and exterior paint programs
- inverted pedestal installation maximising work envelop
- with 7 degrees of freedom, painting work can be done efficiently in a limited space. The paint booth can be drastically reduced with a flexible layout.
- P-1000iA has a hollow wrist structure which is easy with piping. Paint control and colour valves can be installed inside the arm, realising reduced purge time and paint waste.
- it also supports electrostatic painting of waterborne paint, 1K and 2K solvent paints.
- it can be controlled from one controller in combination with the hood opener robot, P-35iA and the door opener robot, P-20iB.
- FANUC's Zero Down Time package, which monitors and protects mechanical parts and painting process equipment is available (option).
